2. The following is an examiner's statement of reasons for allowance:

Applicant invention is drawn to a testing system for measuring the quality of service of a voice communication in a packet-based modern telephone network and for analyzing adherence to a communication protocol. The system comprises a connector adapted to make a connection to a test point in the packet-based network, and an analyzer that measures a quality of service of a voice signal transmitted over the packet-based network and analyzes adherence to a communication protocol at the test point. The analyzer comprises a computer, a configuration module that configures the computer to interface with the packet-based network, a quality of service analysis module that performs an analysis of the quality of service of the voice signal, a communications protocol analysis module that performs an analysis of adherence to the communication protocol, and a report generator that reports a result of the analysis.

Prior art of record failed to teach or fairly suggest in combination the system and method for measuring quality of voice services on modern telephony networks, including VON, PSTN, and hybrid VON/PSTN networks, said system comprising an analyzer that measures quality of service of a signal transmitted over the telephony network; wherein said analyzer further comprises: a quality of service analysis subsystem that performs an *analysis of said quality of service of said signal*; and a communications protocol analysis subsystem that performs an *analysis of adherence to said communication protocol*; and wherein said analyzer further
